IN THE CLAIMS:

Please amend the claims as follows:

14. A method of selecting a propellant that exhibits desirable regression rate during combustion within a port having a gas stream flowing through the port, comprising the steps of:

selecting a propellant having under heat transfer from the gas stream flowing though the port, a liquid layer with surface tension σ and liquid viscosity μ_1 values that promote

entrainment of droplets from said liquid layer into said gas stream flowing in said port;

determining for the selected propellant a onset [for a given port mass flux, $G = \rho_g U_g$, where
